This three-day instructor-led course provides a comprehensive understanding of cloud security principles from the Cloud Security Alliance (CSA) Security Guidance. Covering all 12 domains of critical cloud security knowledge, the course equips learners with the skills to secure cloud environments regardless of cloud provider or platform.

Combining expert-led instruction with hands-on labs, learners explore cloud governance, identity and access management, infrastructure security, application security, data protection, incident response, and emerging technologies such as AI and Zero Trust. Successful completion of the course prepares learners for the Certificate of Cloud Security Knowledge (CCSK+) examination and helps organisations strengthen their cloud security capability.

Prerequisites

Participants should have:

- There are no formal prerequisites for this course
- A basic understanding of cloud computing concepts is recommended
- Familiarity with information security principles will help learners gain maximum benefit from the course
