Duration: **3 Day**

Want to take the next step in your career as a solution architect or enterprise architect? Many organisations are missing the architecture skills to deliver their objectives – in fact, 28% of IT leaders say they've got a skills shortage in enterprise architecture. So, if you want to succeed, you'll need to demonstrate that you've got the skills to drive your organisation's architecture strategy.

The BCS Practitioner Certificate in Enterprise and Solutions Architecture was designed with major employers, having identified their real-life skills gaps. In this Enterprise and Solutions Architecture course, you'll explore how architecture links to an organisation's strategy, mission, vision and purpose, and how it relates to each area of the business. You'll learn to tailor solutions to different stakeholder needs, influence senior leaders, and present a strong business case. The course lets you apply your practical knowledge, giving you confidence that you can put your learning into practice straight away. Plus, you'll build new skills to boost your earning potential and prepare you for your next opportunity.

Prerequisites

Learners require one of the following to take this course:

- BCS Foundation Certificate in Architecture Concepts and Domains
- TOGAF® EA Foundation and Practitioner Program: Level 2
- TOGAF® EA Foundation and Practitioner Program: Combined Level 1 & 2

You should also have at least three years' experience in information systems or IT, including some involvement with architecture.

Recommended reading for any learner undertaking this certification is detailed below:

- Title – Solution Architecture Foundations
- Author – Mark Lovatt
- Publisher – BCS
- Publication Date - 2021

Target audience

This includes professionals with existing experience in IT architecture, such as:

Enterprise Architects, Solution Architects, IT Architects, Business Architects, System Designers, and Technical Leads.

What You Will Learn

In this certificate, you'll learn about:

- The roles of and relationships between architecture levels and domains
- The required skills and professional behaviours of an IT architect
- Tools, frameworks, and artefacts used in architecture
- How to implement and uphold governance and quality assurance
