Overview

This two-day foundation course will provide a practical guide to Data Protection (GDPR) & Privacy Legislation, Information Governance and Data Protection (GDPR) implementation.

Data protection law requires, the appointment of a Data Protection Officer (DPO) for some controllers and processors, including those in the public sector. The obligations for this challenging role will require insight into threats and risks to personal data, data breach management, data protection by design and default principles, privacy compliance, and the legal spectrum of the GDPR.

This course is suitable for data protection officers, HR Professionals, compliance officers, auditors, IT & security Professionals requiring a sound knowledge of the key elements of the data protection law. There is no exam in the two-day course, those wishing to embrace the challenge of the independent exam will need to take the follow-on Certified Data Protection Practitioner course (QACERTDPP).

Prerequisites

There are no prerequisites for this course.

Target audience

This Data Protection Foundation (GDPR) course is primarily aimed at professionals working with IT, Risk, Security, Governance and Compliance roles across public and private sectors. It is also aimed at Human Resources and Marketing Professionals, Product Owners, Business Analysts and Project Managers. It is also the recommended prerequisite for the Data Protection Practitioner (GDPR) course.

What You Will Learn

By the end of this course, learners will:

- understand why privacy is important and how it relates to data protection.
- have a good understanding of the data protection principles and individual rights.
- have an in-depth understanding and knowledge of GDPR (UK and EU).
- be able to locate important articles and recitals when necessary.
