Overview

As organizations accelerate software delivery and deploy code more frequently than ever before, security vulnerabilities and cyber threats continue to grow at the same pace. Modern enterprises can no longer treat security as a separate activity performed at the end of the development cycle. Instead, security must become an integral part of the software delivery process. **DevOps Institute DevSecOps Foundation** provides a comprehensive introduction to the principles, practices, and culture of DevSecOps, enabling organizations to integrate security into every stage of the software development lifecycle.

This course teaches participants the core concepts, terminology, business value, and implementation strategies of **DevSecOps**. Learners will explore how security differs within DevOps environments, how to apply **Security as Code**, and how development, security, and operations teams can collaborate effectively to build secure and resilient systems.

Through real-world case studies, practical exercises, and interactive discussions, participants gain valuable insights into implementing DevSecOps practices within their organizations while preparing for the **DevSecOps Foundation Certification Exam**.

Prerequisites

Participants are recommended to have:

- Basic understanding of DevOps concepts
- Familiarity with software development lifecycles
- Knowledge of continuous integration and delivery practices
- General awareness of IT operations or cybersecurity concepts
