bilginc.com

Amazon Quick for AI-Powered Productivity and Business Intelligence is designed for business users, data analysts, and knowledge workers who want to work more effectively with data and enterprise information through AWS's AI-powered workspace, **Amazon Quick**.

Participants learn how to navigate the Amazon Quick environment and use**Quick Sight** to analyse and visualise data. The course also explores how enterprise knowledge can be organised within **Quick Spaces**, how custom AI chat agents can be created, and how repetitive tasks can be automated using **Quick Flows**.

The programme also covers research across multiple data sources, with an emphasis on validating sources and using AI-supported research responsibly. Hands-on labs, demonstrations, assessments, and group discussions give learners opportunities to apply each major capability in realistic business scenarios.

Course Activities

The course includes:

- Presentations,
- Hands-on labs,
- Demonstrations,
- Assessments,
- Group discussions.

Prerequisites

Participants are recommended to have:

- A basic understanding of cloud computing concepts,
- Familiarity with web-based applications.

Who Should Attend

This course is particularly suitable for:

- AWS customers working as Business Analysts, Data Analysts, Consultants, and Business Users,
- AWS Partners.
