Overview

Transform and load data, define semantic model relationships and calculations, create interactive visuals, and distribute reports using Power BI.

Prerequisites

Completion of the Get started with Microsoft data analytics is recommended.

What You Will Learn

By the end of this course, learners will be able to:

- Navigate the Power BI interface and identify its key components and services.
- Connect to, import, and profile data from a variety of sources using appropriate storage modes.
- Clean, transform, and structure datasets to ensure accuracy and usability for reporting.
- Build and configure semantic models, including relationships, hierarchies, and column settings.
- Design interactive and visually engaging reports using filters, slicers, and diverse visual types.
