Overview

The **BCS Foundation Certificate in Digital Solution Development** is an introductory certification programme providing broad coverage of the concepts, practices, methods and disciplines involved in developing digital solutions within a modern enterprise.

The course focuses particularly on the development space between **Business Analysis and the coding environment**. Participants explore not only how digital solutions are developed, but also how services and requirements are defined, how user experience influences design, how architecture and data are considered, and how quality, deployment, maintenance and cyber security contribute to the wider solution lifecycle.

The programme is designed to remain as independent as possible from individual products, technologies and platforms. This enables participants to build knowledge that can be applied across different organisations, technology environments and digital initiatives.

The course also prepares participants for the **BCS Foundation Certificate in Digital Solution Development** examination, with the syllabus positioned at **SFIA Levels 1/2**.

Prerequisites

There are no mandatory prerequisites for this course.

As a foundation-level programme, it is suitable for participants from a range of professional and technical backgrounds.
