Overview

The Jamf 300 Course builds on prior knowledge to provide a deeper understanding of the macOS and iOS management capabilities within Jamf Pro through workflows and scenario-based instruction.

Prerequisites

- Earned Jamf Certified Tech or Certified Casper Technician (version 9)
- Previous Jamf Certified Admin or Certified Casper Administrator certification (version 9)
- Basic scripting knowledge including variables and if statements
- Delegate needs to attend the JAMF 200

Outline

- Patch management software titles, definitions, and policies
- Computer and mobile device enrollment using Device Enrollment Program and User Initiated Enrollment
- Security workflows including FileVault, Activation Lock and Restrictions
- Collection and modification of additional inventory data
- Introduction to the Jamf Pro API
- Advanced packaging, script, and policy deployment workflows
- Sites and delegated Jamf Pro user permissions
- Jamf Pro management and deployment framework
- User-level configuration profiles

What's Included?

- Four days of lab-style, workflow-based learning, and peer discussion
- All hardware and software required for the course
- Printed course materials
- Jamf Certified Admin badge on your Jamf Nation profile (upon successfully completing the exam with a passing score)
