Delivering a project on time and within budget is important, but true success also depends on achieving the required level of **Quality Management**. The **Quality for Project Managers** course is designed to help project professionals integrate quality principles into every phase of the project lifecycle.

Participants will learn how to develop and improve organizational quality programs, implement **Quality Assurance (QA)** and **Quality Control (QC)** activities, and apply modern quality management methodologies to increase project success rates. The course emphasizes **Systems Thinking**, stakeholder engagement, risk awareness, and continuous improvement practices.

Through practical exercises and case studies, learners will gain experience creating a comprehensive **Quality Management Plan** and applying quality processes to real-world projects.

Prerequisites

To gain the maximum benefit from this course, participants should have:

- Basic **Project Management** knowledge
- Experience working in project environments
- Familiarity with project coordination or leadership activities
- Completion of a **Project Management Fundamentals** course is recommended

Who Should Attend

This course is ideal for:

- **Associate Project Managers**
- **Project Managers**
- **IT Project Managers**
- **Project Coordinators**
- **Project Analysts**
- **Project Leaders**
- **Senior Project Managers**
- **Quality Assurance Professionals**
- **Product Managers**
- **Program Managers**
