bilginc.com

AI for Project Management is an immersive and practical training program designed for professionals who want to leverage **Artificial Intelligence (AI)** to enhance project management performance, improve decision-making, and drive innovation across organizations.

The course provides hands-on experience with **Generative AI**, **Large Language Models (LLMs)**, automation technologies, and AI-powered project management solutions. Participants will learn how to integrate AI into project workflows while balancing technological capabilities with human judgment and governance.

Through real-world exercises and interactive learning experiences, attendees will discover how AI can support communication, reporting, stakeholder engagement, risk management, and project delivery throughout the project lifecycle.

Prerequisites

To maximize the benefits of this course, participants should have:

- Foundational **Project Management** knowledge
- Experience working in project environments
- Familiarity with **PMP®**, Agile, or related project management frameworks (recommended)

Who Should Attend

This course is ideal for:

- **Project Managers**
- **Project Directors**
- **Program Managers**
- **Portfolio Managers**
- **Product Managers**
- **Agile Coaches**
- Development team members
- Digital transformation leaders
- Professionals interested in AI-driven innovation

What You Will Learn

By the end of this course, learners will be able to:

- Understand the impact of **Generative AI** on project management.
- Identify automation opportunities across project environments.
- Integrate AI tools with existing **Project Management Software**.
- Improve communication and reporting processes using AI.
- Address **Data Privacy**, security, and ethical considerations.
- Apply AI throughout the **Project Lifecycle**.
- Enhance **Risk Management** and **Stakeholder Management** activities.
- Develop AI implementation strategies for project environments.
- Deploy practical AI solutions within their organizations.

Training Outline

Part 1: Generative AI Enablement

- Fundamentals of **Artificial Intelligence**
- AI capabilities and limitations
- **Generative AI** applications
- **Large Language Models (LLMs)**
- Effective prompting techniques
- Best practices for AI interactions
- Identifying automation opportunities

Part 2: AI-Enhanced Project Management Environments

- AI-powered project management platforms
- **AI Project Management Tools**
- Enterprise AI solutions
- Internal **LLM** implementation
- AI integration strategies

Part 3: Applying AI in Daily Project Management Activities

- Content creation and communication support
- Documentation automation
- Data collection and analysis
- **Stakeholder Feedback Analysis**
- **Sentiment Analysis**
- Information retrieval and extraction
- Intelligent reporting processes
- **Text Summarization** techniques

Part 4: Implementing AI within a Project Management Framework

- AI throughout the **Project Lifecycle**
- **Project Governance**
- Decision-support systems

- **Risk Management**
- **Stakeholder Management**
- Change management processes
- Operational efficiency improvements

Part 5: Ethical Considerations in AI-Assisted Projects

- **Data Privacy**
- Information security practices
- **AI Bias**
- Responsible AI usage
- Legal requirements
- Compliance and regulatory considerations

Part 6: Developing an AI-Enabled Project Management Strategy

- Current state assessment
- AI maturity evaluation
- Adoption roadmap development
- Strategic planning
- Change management initiatives

Part 7: Future Trends in Project Management

- Emerging **AI Agents**
- Autonomous project management capabilities
- AI-driven decision-making systems
- Digital transformation trends
- The future role of project managers
