Overview

The **{*training}** course provides participants with the knowledge and hands-on experience required to design secure, scalable, highly available, and cost-effective cloud architectures on AWS. Based on AWS architectural principles and the **AWS Well-Architected Framework**, the course explores best practices for building modern cloud solutions that align with business and technical requirements.

Participants will learn how to design solutions using AWS compute, storage, networking, database, and security services while addressing key considerations such as high availability, disaster recovery, performance optimisation, security, and cost management. The course also covers architectural decision-making and the trade-offs involved in designing cloud-native environments.

Through practical labs and real-world scenarios, learners will develop the skills needed to build enterprise-grade AWS architectures and establish a strong foundation for the **AWS Certified Solutions Architect – Associate** certification.

Prerequisites

Participants are recommended to have:

- Familiarity with **AWS Cloud Concepts**
- Completion of **AWS Cloud Practitioner Essentials** (recommended)
- Basic understanding of distributed systems
- Knowledge of multi-tier application architectures
- Familiarity with networking, storage, and database concepts
