Overview

This course equips participants with the skills to automate Azure Load Testing using GitHub Actions. It covers designing GitHub workflows, integrating them with Azure, and executing performance tests to simulate and enhance application resilience.

Prerequisites

- Understanding of GitHub workflows.
- Familiarity with Azure resource management.
- Target audience
- DevOps engineers.
- Cloud architects.
- Application developers.

What You Will Learn

- Design and implement GitHub Actions workflows.
- Configure Azure Load Testing for automated test scenarios.
- Analyse application performance under varying loads.
