Organisations are increasingly adopting automation to simplify data centre operations, improve consistency, and accelerate service delivery. We believe network automation is essential for modern data centre teams, enabling them to reduce manual effort, minimise configuration errors, and respond more quickly to changing business requirements.

This five-day instructor-led course equips learners with the knowledge and practical skills to automate Cisco data centre environments using industry-standard tools and technologies. You'll explore programmability concepts, automation frameworks, APIs, Infrastructure as Code, and model-driven programmability while developing practical skills that can be applied immediately within production environments.

Prerequisites

To gain the maximum benefit from this course, learners should have:

- Good understanding of Ethernet and TCP/IP networking
- Experience working with Cisco Nexus switches and Cisco data centre technologies
- Familiarity with Cisco NX-OS software and basic data centre operations
- Foundational knowledge of Python programming concepts
- Basic understanding of network automation principles and APIs
- Experience with Cisco ACI is beneficial but not essential

Target audience

This course is designed for:

- Network engineers responsible for Cisco data centre infrastructure
- Data centre engineers and administrators
- Systems engineers implementing network automation solutions
- Network architects designing programmable infrastructure
- DevOps engineers working with network automation
- Technical consultants supporting Cisco data centre environments
- IT professionals preparing for the Cisco 300-635 DCNAUTO certification exam

What You Will Learn

By the end of this course, learners will be able to:

- Describe the principles of network programmability and automation within Cisco data centre environments
- Explain how APIs, data models, and automation frameworks support modern infrastructure management
- Configure and use Cisco NX-API, NETCONF, and RESTCONF to automate network operations
- Create and modify Python scripts to automate routine administrative tasks
- Implement Infrastructure as Code using Ansible and Terraform
- Use YANG data models to interact with programmable network devices
- Deploy and manage automation using Cisco Nexus Dashboard Fabric Controller
- Validate and test network configurations using Cisco pyATS
- Apply automation techniques to improve operational efficiency and consistency
- Prepare for the Cisco Implementing Cisco Data Center Automation (300-635 DCNAUTO v2.0) certification exam
