Overview

Expand your capability to lead product and service design projects.

For Black Belts who want to be able to lead design as well as process improvement projects, this course provides a grounding in the principles and methodology that underpin Design for Six Sigma.

Prerequisites

Delegates must already hold a Lean Six Sigma Black Belt certification

What You Will Learn

As a result of attending this course delegates will be able to:

- Describe the phases and key tools in the project-based approach to product/service and process design
- Guide a team in the use of advanced techniques to translate customer requirements into design requirements, functions and parameters
- Understand the phases of development and some of the key tools used in each phase of development
