bilginc.com

This Microsoft Power Platform Dataverse and Model-Driven App course is designed for anyone who needs to understand the Microsoft Power Platform Dataverse database, including how to create a data model. The training continues with building Microsoft Power Platform Model-Driven Apps to consume and work with the data from the Dataverse database. This course also explains the Microsoft Power Platform Security model and how to secure the Dataverse database data and their associated Model-Driven Apps.

Are you needing to upgrade your Dynamics 365 skills? This training will help you get to grips with the new Microsoft Power Platform interfaces and show you the new routes to work with and customise Dynamics 365 data.

This course forms part of the learning required for the Microsoft exam PL-200: Power Platform Functional consultant. With additional study or training courses delegates can gain this valuable Microsoft Certification.

Prerequisites

Important - This course has MFA Requirements. Please read this link and download the MFA app, prior to attending.

- A basic understanding of cloud technology including the Power Platform.
- An understanding of relational databases is an advantage, but not mandatory.

Instructors will demonstrate features throughout the event. Optional Lab exercises are available for students to complete within a delegate created free trial tenancy. Microsoft may require a valid credit card to create 30 day free tenancies which must be cancelled within 30 days to avoid incurring charges. QA have no control over the Microsoft 365 trial tenancy signup or billing process.
