

Implementing Cisco IP Telephony and Video - Part 2

Learn via: **Classroom**

Duration: **5 Day**

Overview Implementing Cisco IP Telephony & Video, Part 2 (CIPTV2) v1.0 is a five-day course that prepares the learner for implementing Cisco Unified Communications Manager, Cisco VCS-C, and Cisco Expressway series in a multisite voice and video network. It covers globalized call routing, URI call routing, global dial plan replication based on the ILS, Cisco Unified SRST, mobility features, call admission control, integration of Cisco VCS and Cisco Unified Communications Manager, and Cisco Mobile Remote Access on Cisco Expressway Series.

Prerequisites

- Working knowledge of converged voice, video, and data networks
- Working knowledge of the MGCP, SIP, and H.323 protocols and their implementation on Cisco IOS gateways
- Ability to configure and operate Cisco routers and switches
- Ability to configure and operate Cisco Unified Communications Manager in a single-site environment
- Completion of Implementing Cisco IP Telephony & Video, Part 1 (CIPTV1)

Who should attend

The primary target audiences for the course are:

- Network administrators and network engineers
- CCNP Collaboration candidates

Secondary audiences are:

- Systems engineers Certifications

This course is part of the following Certifications: Cisco Certified Network Professional Collaboration (CCNP)

What You Will Learn

By the end of this course, you should be able to:

- Describe multisite deployment issues and solutions, and describe and configure required dial plan elements
- Implement call-processing resiliency in remote sites by using Cisco Unified SRST and MGCP fallback
- Implement bandwidth management and CAC to prevent oversubscription of the IP WAN
- Implement Device Mobility, Cisco Extension Mobility, and Cisco Unified Mobility
- Implement Cisco VCS Control and Cisco Expressway Series
- Describe and implement CCD and ILS

Training Outline

Module 1: Multisite Deployment Implementation

- Multisite Deployment Issues Overview
- Quality Issues
- Bandwidth Issues
- Availability Issues
- Overview of Dial Plan Issues
- Fixed-Length vs. Variable-Length Numbering Plans
- Optimized Call Routing and PSTN Backup
- Overlapping and Nonconsecutive Numbers
- PSTN Requirements
- Dial Plan Scalability Issues
- NAT and Security Issues

- Multisite Deployment Solution Overview
- Quality of Service
- Overview of Solutions to Bandwidth Limitations
- Low-Bandwidth Codecs and RTP-Header Compression
- Local Conference Bridges
- Transcoders
- Mixed Conference Bridge
- Multicast MOH from Branch Router Flash
- Call Admission Control
- Availability Overview
- PSTN Backup
- MGCP Fallback: Normal Operation
- Fallback for IP Phones: Normal Operation
- Call Forward Unregistered
- Automated Alternate Routing
- Mobility Solutions
- Overview of Dial Plan Solutions
- NAT and Security Solutions
- Overview of Multisite Connection Options
- SIP Trunk Review
- H.323 Trunks
- Trunk Implementation Overview
- Multisite Dial Plan Overview
- Implementing Site Codes for On-Net Calls
- Implementing PSTN Access
- Implementing Selective PSTN Breakout
- Implementing PSTN Backup for On-Net Intersite Calls
- Implementing TEHO
- Globalized Call Routing Overview
- Globalization of Localized Call Ingress on Gateways
- Localized Call Egress
- Globalized Call Routing Examples
- URI Dialing Overview
- URI Endpoint Addressing Review
- URI Partitions and CSSs Review
- URI Call Sources Review
- Blended Addressing
- FQDNs in Directory URIs
- URI Call Routing

Module 2: Centralized Call-Processing Redundancy Implementation

- Remote Site Redundancy Overview
- MGCP Fallback Operation
- Cisco Unified SRST Operation
- Cisco Unified Communications Manager Express in SRST Mode
- Dial Plan Requirements for MGCP Fallback and Cisco Unified SRST Scenarios

Module 3: Bandwidth Management and CAC Implementation

- Bandwidth Management Options
- Cisco Unified Communications Manager Codec Configuration
- Local Conference Bridge Implementation
- Transcoder Implementation
- Multicast MOH from Branch Router Flash Implementation
- CAC Overview
- Enhanced Location CAC Characteristics
- Intracluster Enhanced Location CAC
- Intercluster Enhanced Location CAC
- Enhanced Location CAC Considerations
- Automated Alternate Routing

Module 4: Implementation of Features and Applications for Multisite Deployments

- Issues with Devices Roaming Between Sites
- Device Mobility Overview
- Device Mobility Configuration Elements
- Device Mobility Operation
- Device Mobility Considerations
- Device Mobility Interaction with Globalized Call Routing
- Device Mobility Configuration
- Issues with Users Roaming Between Sites

- Cisco Extension Mobility Overview
- Cisco Extension Mobility Configuration Elements
- Cisco Extension Mobility Operation
- Cisco Extension Mobility Considerations
- Cisco Extension Mobility Configuration
- Cisco Unified Mobility Overview
- Cisco Unified Mobility Call Flows
- Cisco Unified Mobility Implementation Requirements
- Cisco Unified Mobility MGCP or SCCP Gateway PSTN Access
- CSS Handling in Cisco Unified Mobility
- Cisco Unified Mobility Access-List Functions
- Cisco Unified Mobility Configuration

Module 5: Cisco VCS and Cisco Expressway

- Cisco VCS and Cisco Expressway Series Overview
- Cisco VCS and Cisco Expressway Series Deployment Options
- Cisco VCS and Cisco Expressway Series Platforms, Licenses, and Features
- Cisco VCS and Cisco Expressway Clustering
- Cisco VCS and Cisco Expressway Series Initial Configuration
- User Authentication Options
- Endpoint Registration
- Endpoint Authentication
- Cisco TMS Provisioning
- Zones
- Links
- Pipes
- Cisco Unified Communications Manager and Cisco VCS Interconnection Overview
- Call Flow between Cisco Unified Communications Manager and Cisco VCS
- Cisco VCS Dial Plan Components
- Configuration of Cisco Unified Communications Manager and Cisco VCS Interconnections
- FindMe Configuration Procedure
- Unified Communications Mobile and Remote Access Overview
- Unified Communications Mobile and Remote Access Components
- Unified Communications Mobile and Remote Access Operations
- Unified Communications Mobile and Remote Access Configuration Procedure

Module 6: GDPR and CCD

- ILS Overview
- ILS Networking
- GDPR Overview
- ILS Network Configuration Procedure
- Exchange of Directory URIs
- Configuration of Directory URI Exchange
- Exchange of Numbers and Patterns
- Configuration of Number and Pattern Exchange
- Import and Export of Global Dial Plan Catalogs
- SAF and CCD Overview
- SAF Characteristics
- CCD Characteristics
- CCD Operation
- Monitoring Learned Routes
- Cisco Unified SRST Considerations
- Considerations When Using Globalized Call Routing
- Trunk Considerations
- Considerations When Using Clustering Over the WAN
- SAF and CCD Implementation Overview
- Configure SAF and CCD

Labs

- Implementing a +E.164-Based Dial Plan for International Multisite Deployments
- Implementing a URI-Based Dial Plan for Multisite Deployments
- Implementing SRST and MGCP Fallback
- Implementing Bandwidth Management
- Implementing Enhanced Location CAC
- Implementing Device Mobility
- Implementing Extension Mobility
- Implementing Cisco Unified Mobility
- Configuring Cisco VCS Control to Register Endpoints
- Implementing a Dial Plan in Cisco VCS Control to Interconnect with Cisco Unified Communications Manager
