Overview

Modern Skills for Robust Web Development | Core Python, Classes, Django Architecture, Views, Querying, Templates, Testing & More

Designed for experienced web developers who are new to Python, *Introduction to Full Stack Web Development with Python and Django* is a **five-day, hands-on** training course that equips students with the skills to build dynamic, full-stack web applications using the Django framework.

Participants will start with the fundamentals—creating applications with the MVC (Model-View-Controller) design pattern—and advance to complex topics such as administration, session management, authentication, and automated testing.

Unlike purely academic courses that focus on syntax and grammar, this comprehensive, practical training dives deep into *real-world, applicable Python programming*. By the end, attendees will be able to confidently use Python and Django to deliver functional, production-ready projects.

Key Course Topics

- **The Python Environment**
- Getting Started
- Flow Control
- Lists and Tuples
- Working with Files
- Dictionaries and Sets
- Functions
- Error and Exception Handling
- Using Modules
- Classes
- Django Architecture
- Configuring a Project
- Adding an Application
- *"Login for Nothing" and "Admin for Free"*
- Basic Views (Controllers) and Templates

- Querying Models
- Working with Templates
- Forms
- Automated Testing

Prerequisites

This introductory-level {*training} is intended for **experienced web developers new to Python** who wish to use Python and Django for full-stack web development projects.

Recommended Knowledge:

- Web development fundamentals (HTML5, CSS3, Responsive Design – Course TT4605)

Who Should Attend

- Web Developers
- Full Stack Developers

What You Will Learn

This course is **approximately 50% hands-on**, blending:

- Expert-led lectures
- Real-world demonstrations
- Group discussions
- Machine-based labs and exercises

Under the guidance of experienced practitioners with extensive industry expertise, attendees will:

- Develop full-stack websites driven by content stored in an RDBMS
- Use Python data types effectively
- Define and work with data models
- Understand Django-based web application architecture
- Create Django templates for easily maintainable views
- Map views to URLs
- Leverage the built-in Django Admin interface
- Implement HTML form processing

Outline

The Python Environment

- Starting Python
- Using the interpreter
- Running Python scripts (Unix/Windows)
- Editors and IDEs

Getting Started

- Variables
- Built-in functions
- Strings and numbers
- Type conversion

BİLGİNÇ IT Academy

info@bilginc.com

bilginc.com

- Output to the screen
- Command-line parameters

Flow Control

- Conditional expressions
- Relational & Boolean operators
- While loops and loop exits
- White space significance

Lists and Tuples

- Sequences overview
- Lists and their methods
- Tuples
- Indexing & slicing
- Iterating sequences
- List comprehensions
- Nested sequences

Working with Files

- Opening, reading, writing files
- Using with statements
- Handling binary data

Dictionaries and Sets

- Creating and iterating dictionaries
- Creating and managing sets

Functions

- Parameters, scope, return values
- Sorting data

Errors and Exception Handling

- Syntax errors vs exceptions

BİLGİNÇ IT Academy

info@bilginc.com

bilginc.com

- try/except/else/finally
- Handling multiple exceptions

Using Modules

- Importing modules
- Module search paths
- Creating your own modules

Classes

- Object-oriented programming concepts
- Constructors, methods, inheritance

Django Architecture

- Sites and apps
- Shared configurations
- Minimal project layout

Configuring a Project

- Using manage.py
- Starting projects and setting up databases
- Development server

Adding an Application

- Creating apps and models
- Relationships and migrations
- Accessing model data

Login for Nothing & Admin for Free

- Creating admin users
- Customizing the admin interface

Basic Views & Templates

- Views and HttpResponse

BILGINÇ IT Academy

info@bilginc.com

bilginc.com

- URL routing
- Template syntax, static files, and inheritance

Querying Models

- QuerySets, filters, slicing, related fields

Working with Templates

- Variables, comments, filters, escaping HTML, custom filters

Forms

- GET & POST
- The Form class, widgets, validation

Automated Testing

- Django's testing framework
- Using the test client
- Measuring code coverage
