Overview

Threat and Vulnerability Management Training is designed to provide participants with a comprehensive understanding of information security threats and the knowledge required to establish an effective vulnerability management process that supports an organization's security posture.

The course introduces the concepts of threats, risks, and vulnerabilities while examining the changing information security landscape, fundamental risk management principles, and risk analysis methods. Participants will explore how security vulnerabilities emerge, the factors that contribute to them, and the stages of the vulnerability lifecycle.

The program also addresses the importance of patch and update management, the challenges organizations face when managing patches, and the tools and processes used to support these activities. Vulnerability identification methods and management practices are examined to help participants understand how to design and implement a structured vulnerability management program.

By covering these essential areas, the training aims to equip participants with the knowledge needed to assess information security risks and develop systematic processes for managing vulnerabilities within their organizations.
