This course will teach you how to use Anthos in modernizing, managing, and observing microservice-based applications and services that span multiple clusters in GCP, on-premises, or other cloud providers. This course is intended for technical engineers, architects, and administrators using Google Cloud Platform (GCP), Kubernetes, and Istio to create, integrate, or modernize solutions.

Prerequisites

What You Will Learn

- Deploy service mesh control-plane and proxies.
- Centrally observe, discover, and monitor your microservices-based applications across clusters.
- Define and manage multi-cluster services, using open-source service mesh and multiple control-plane topologies.
- Enable consistent policy enforcement across multi-cluster services.
