Overview

What Can You Achieve with This Training?

- Build the skills to **deploy, administer, secure, and troubleshoot Windows Server** across on-premises, hybrid, and cloud environments.
- Manage identity services through **Active Directory Domain Services (AD DS)**, domain controllers, user accounts, and Group Policy.
- Configure **Hyper-V and Azure virtual machines** to support virtualization, remote administration, and high availability.
- Simplify server administration and automate repetitive tasks with **PowerShell, Windows Admin Center, and Azure Arc**.
- Improve the reliability of Windows Server environments by managing **networking, storage, file services, and security policies**.
- Support monitoring, updates, and security management with **Azure Monitor, Azure Update Manager, and Microsoft Defender for Cloud**.

The **Administer Windows Server Training** is a comprehensive technical course designed to develop the skills required to **deploy, manage, secure, and troubleshoot Windows Server workloads** across on-premises, hybrid, and cloud environments.

The programme covers the core responsibilities of Windows Server administration, including **identity management, virtualization, networking, storage, security, and monitoring**.

The identity management modules focus on **Active Directory Domain Services (AD DS)**, domain controllers, **FSMO roles**, Active Directory objects, and **Group Policy Objects (GPOs)**. Participants also explore hybrid identity configurations involving Windows Server.

Server administration and automation topics introduce tools such as **Windows Admin Center, Windows PowerShell, Azure Arc, and Azure Automation**. The course examines remote administration, secure management practices, and automation of virtual machine configuration.

Participants also explore **Hyper-V and Azure IaaS virtual machines**, DNS, DHCP, IP address management, file servers, and advanced storage technologies. Security-related topics include protecting Windows Server workloads and enforcing virtual machine security settings through **Azure Machine Configuration**.

The course is designed to help IT professionals manage Windows Server infrastructure **consistently, securely, and efficiently across different deployment environments**.

Exams and Assessments

Administer Windows Server Training

Duration: **5 Day**

BİLGİNÇ IT Academy

bilginc.com

The **AZ-802 examination** is available separately from the training course.

Prerequisites

Participants should have experience administering **Windows Server** and be familiar with the following technologies:

- **Windows Admin Center**
- **Hyper-V**
- **Windows PowerShell**
- **Azure Arc**
- **Azure Monitor**
- **Azure Update Manager**
- **Microsoft Defender for Cloud**
- **Active Directory Domain Services (AD DS)**

Who Should Attend

This course is intended for **Windows Server administrators** responsible for deploying, implementing, administering, and troubleshooting Windows Server workloads in **on-premises, cloud, and hybrid environments**.

It is particularly relevant to professionals working in:

- **Identity and access management**
- **Server and virtualization infrastructure**
- **Networking and storage services**
- **Security and compliance**
- **System monitoring and troubleshooting**

The course is also suitable for Windows Server professionals who collaborate with infrastructure architects, administrators, and engineers.

What You Will Learn

By the end of this course, participants will be able to:

- Deploy, administer, and secure **Windows Server workloads** across on-premises, hybrid, and cloud environments.
- Manage **Active Directory Domain Services**, configure domain controllers, and administer **FSMO roles**.
- Create and manage **Active Directory objects, Group Policy Objects, and hybrid identity** configurations.
- Perform server administration tasks using **Windows Admin Center and PowerShell**.
- Manage remote systems with **PowerShell Remoting** and automate **Azure IaaS virtual machine** configuration.
- Administer hybrid workloads through **Azure Arc** and support update management with tools such as **Azure Update Manager**.
- Configure and manage **Hyper-V and Azure virtual machines**, including security, scalability, and high-availability capabilities.
- Deploy and administer **DNS, DHCP, IP addressing, routing, and IPAM** services.
- Manage file servers and storage technologies, including **Storage Spaces, Storage Spaces Direct, Data Deduplication, iSCSI, and Storage Replica**.
- Enforce virtual machine security settings through **Azure Machine Configuration**.
- Strengthen **Windows Server security configurations** and apply relevant security policies.
- Support monitoring, security assessment, and troubleshooting with tools such as **Azure Monitor and Microsoft Defender for Cloud**.

Outline

1. Active Directory Domain Services and Identity Management

- Deploying and administering **Active Directory Domain Services (AD DS) domain controllers**
- Deploying and managing **Azure IaaS Active Directory domain controllers** in Azure
- Managing **AD DS domain controllers and FSMO roles**
- Creating, configuring, and administering **Active Directory objects**
- Implementing **hybrid identity** with Windows Server

BİLGİNÇ IT Academy

info@bilginc.com

bilginc.com

- Creating and configuring **Group Policy Objects (GPOs)** in Active Directory

2. Windows Server Administration Tools and Secure Administration

- Exploring **Windows Server administration tools** and their capabilities
- Understanding **Just Enough Administration (JEA)** in Windows Server
- Applying **secure Windows Server administration** practices

3. Remote Management and Automation

- Using advanced **Windows PowerShell Remoting** techniques
- Managing **individual and multiple computers** through PowerShell Remoting
- Remotely administering **Windows Server IaaS virtual machines**
- Automating the configuration of **Windows Server IaaS virtual machines**
- Exploring **Azure Automation** in connection with **DevOps** practices

4. Hybrid Management and Updates

- Managing **hybrid workloads** with **Azure Arc**
- Administering **Azure updates** and related update processes

5. Hyper-V and Virtual Machine Management

- Configuring and administering **Hyper-V virtual machines**
- Configuring and managing the **Hyper-V platform**
- Applying security measures to **Hyper-V workloads**
- Implementing **high availability** for Windows Server virtual machines
- Planning and deploying **Windows Server IaaS virtual machines**
- Implementing **scalability and high availability** for Windows Server VM environments

6. Networking

- Configuring **IP addressing and routing** for Windows Server IaaS virtual machines
- Implementing **network security** for Windows Server IaaS virtual machines
- Deploying and configuring **Windows Server DNS**
- Configuring DNS for **Windows Server IaaS virtual machines**
- Securing **Windows Server DNS** services

BİLGİNÇ IT Academy

bilginc.com

- Deploying and administering **DHCP**
- Implementing **IP Address Management (IPAM)**

7. Storage and File Services

- Implementing a **hybrid file server infrastructure**
- Administering **Windows Server file servers**
- Configuring **Storage Spaces and Storage Spaces Direct**
- Implementing **Windows Server Data Deduplication**
- Configuring **Windows Server iSCSI**
- Implementing **Windows Server Storage Replica**

8. Security and Compliance

- Enforcing **virtual machine security configurations** through **Azure Machine Configuration**
