bilginc.com

This HPE NonStop Administration course is the second of three courses to make you familiar with administering an HPE NonStop System. In this 5 day class we build on the basic skills acquired in the first class, giving a more detailed knowledge of monitoring the system, with a strong emphasis on problem recognition, reporting and resolution, including escalation where necessary. The course is 60% lecture and 40% hands on labs using HPE servers.

## Prerequisites

NonStop Server Administration I or at least 9 months of NonStop administration experience

**Audience**

System Operators, System Administrators, Systems Analysts, Technical Support Analysts

## What You Will Learn

• Provide an overview of the NonStop series server.

• Describe computing environments and operator tasks

• Provide an overview of OSM, TACL, and SCF.

• Demonstrate the use of TACL, FUP, and SCF commands

• Understand the use of the StoreEasy Management Tools

• Describe how to view, modify, and correct security, disks, tapes, processes, and application related problems.

• Demonstrate how to view, modify, and correct system spooler and print job problems.

• Describe how to view, modify, and correct
