bilginc.com

Our newly introduced SolarWinds Network Expert class is meticulously tailored for SolarWinds administrators with a strong focus on network management.

This class delves into network-specific modules and topics not typically covered in other Loop1 classes.

Intended for students with a minimum of six months of hands-on experience in SolarWinds Network Performance Monitor (NPM) and Network Configuration Manager (NCM) administration, or graduates of our Loop1 SolarWinds Platform Administration class, this class assumes a basic understanding of element polling and web console navigation.

Who Should Attend?

Students who want to elevate their SolarWinds skills and prepare to tackle complex network management challenges with confidence and expertise.

What You Will Learn

Students will learn to,

- Explore network-specific modules and topics not covered elsewhere.
- Enhance your knowledge of NPM, LA, NCM, NTA, IPAM, UDT, and VNQM.

Training Outline

This comprehensive class covers the following SolarWinds modules:

- Network Performance Monitor (NPM)
- Log Analyzer (LA)
- Network Configuration Manager (NCM)
- NetFlow Traffic Analyzer (NTA)
- IP Address Manager (IPAM)
- User Device Tracker (UDT)
- VoIP & Network Quality Manager (VNQM)

Elevate your SolarWinds skills and prepare to tackle complex network management challenges with confidence and expertise.
