Intermediate Querying SQL Databases using T-SQL Training

Duration: **2 Day**

BILGINÇ IT Academy
info@bilginc.com
bilginc.com

Take your SQL querying expertise to the next level with this**hands-on, expert-led {*training} course**. Designed for professionals who already understand basic T-SQL concepts, this program explores advanced querying techniques, optimization strategies, and real-world scenarios used in Microsoft SQL Server environments (from SQL Server 2005 through 2016).

Please note: This is **not a beginner course**.

Prerequisites

Who Should Attend

This course is ideal for:

- IT Professionals working with Microsoft SQL Server (2005–2016).
- Technical users writing queries for reporting or data analysis.
- Non-technical “power users” familiar with SQL Server Management Studio who wish to enhance their analytical skills.

Delegates joining via Extended Virtual Classroom will require a dual-monitor setup.

What You Will Learn

By the end of this {*training}, you will have gained knowledge and skills in the following areas:

- Use **table expressions** (views, CTEs, and table-valued functions) effectively.
- Compare datasets using **set operators** such as UNION, INTERSECT, and EXCEPT.
- Implement **window functions** for ranking, aggregation, and offset analysis.
- Apply **PIVOT, UNPIVOT, and GROUPING SETS** for multidimensional reporting.
- Write advanced **T-SQL programs** with variables, conditionals, and loops.
- Manage **errors and transactions** using TRY/CATCH and transaction control statements.

Training Outline

Module 1: Using Table Expressions

Intermediate Querying SQL Databases using T-SQL Training

Duration: **2 Day**

BİLGİNÇ IT Academy
info@bilginc.com
bilginc.com

Module 1: Using Table Expressions

- Creating and using **Derived Tables**
- Implementing **Common Table Expressions (CTEs)**
- Defining and managing **Views**
- Building **Inline Table-Valued Functions**

Module 2: Using Set Operators

- Combining datasets with **UNION**
- Comparing data with **EXCEPT** and **INTERSECT**
- Applying the **APPLY** operator for advanced joins

Module 3: Using Window Ranking, Offset, and Aggregate Functions

- Understanding the **OVER** clause
- Applying window functions: **ROW_NUMBER, RANK, DENSE_RANK, NTILE**
- Utilizing **LAG, LEAD, FIRST_VALUE, LAST_VALUE**

Module 4: Pivoting and Grouping Sets

- Transforming data with **PIVOT** and **UNPIVOT**
- Building multi-level summaries with **GROUPING SETS, ROLLUP, and CUBE**

Module 5: Programming with T-SQL

- Working with **batches, variables, and control flow**
- Implementing **dynamic SQL** and **synonyms**
- Understanding loops and conditional logic

Module 6: Implementing Error Handling

- Differentiating compile-time and run-time errors
- Managing errors with **TRY/CATCH**
- Using **ERROR functions** and the **THROW** statement

Module 7: Implementing Transactions

- Understanding **ACID principles**
- Controlling transactions with **BEGIN, COMMIT, ROLLBACK**
