Overview

Disasters — whether caused by natural events, human error, or technological failures — can critically disrupt an organisation's ability to achieve its objectives.
This **four-day instructor-led certification course** equips professionals with the knowledge and tools needed to **establish, implement, and manage disaster recovery (DR) plans** that ensure organisational resilience and business continuity.

Through a combination of theoretical sessions, real-world case studies, and guided exercises, participants will learn how to anticipate, prevent, and respond to disasters using a structured **Disaster Recovery Planning (DRP)** framework aligned with global best practices.

Prerequisites

A basic understanding of **disaster recovery and business continuity principles** is recommended.

Who Should Attend

This course is ideal for:

- Disaster Recovery and Business Continuity Professionals
- IT Managers and Infrastructure Administrators
- Risk Management and Security Consultants
- Members of Disaster Recovery Teams
- Professionals responsible for **ICT resilience and continuity management**

Certified Lead Disaster Recovery Manager Training

Duration: **4 Day**

What You Will Learn

After completing this training, participants will be able to:

- Understand the **core principles and tiers** of disaster recovery.
- Initiate and manage a **disaster recovery project** aligned with organisational needs.
- Conduct **risk assessments** and **business impact analyses (BIA)** to identify vulnerabilities.
- Develop and document an effective **Disaster Recovery Plan (DRP)** integrated with incident response and crisis management strategies.
- Perform **disaster recovery testing**, validate performance, and establish continuous improvement processes.

Outline

Day 1: Understanding Disaster Recovery Concepts

- Overview of disaster recovery and continuity principles
- Identifying disaster types (natural, human, technological)
- Framework for disaster recovery management

Day 2: Disaster Recovery Planning

- Establishing the disaster recovery project
- Conducting risk assessment and business impact analysis (BIA)
- Designing mitigation strategies and prevention mechanisms

Day 3: Developing and Activating the DRP

- Building the **Disaster Recovery Plan (DRP)**
- Integrating with **incident response**, **emergency**, and **crisis management** plans
- Selecting a **disaster recovery site** and defining communication protocols

Day 4: Testing, Maintenance, and Continuous Improvement

- Conducting **disaster recovery testing and performance evaluation**
- Maintaining and updating DRP documentation
- Measuring effectiveness and training DR teams
