Overview

The HPE Superdome Flex Server is the mission critical, in[1]memory computing solution that delivers an unprecedented combination of scale, modularity, flexibility, and reliability. This course provides an overview of system components and practical experience. You will learn to prepare and install supported operating systems, monitor system performance with HPE Foundation Software (HFS) and HPE OneView, use rack management controller (RMC) commands to power on and boot the server, configure autopower, retrieve hardware configuration, and monitor log files.

Prerequisites

Enterprise Linux System Administration (H7091S) or equivalent Linux, VMware® or Windows Server administration experience
