bilginc.com

Overview

A hands-on course covering SIP security. It is assumed that delegates already know SIP as this course focuses purely on the security issues in SIP IP telephony networks. Hands-on practicals follow each major theory session and include use of various SIP security tools such as vomit, sipp, sipsak and sivus amongst others.

Prerequisites

There are no formal prerequisite courses, just a good knowledge of how SIP works.

A good suggested course would be Definitive SIP for Engineers

What You Will Learn

By the end of the course delegates will be able to:

- Secure SIP networks
- Use various SIP security tools
