Overview

Connection to the Internet is becoming an essential business tool. This course looks at firewalls, digital certificates, encryption and other essential topics for e-commerce sites. A generic course that looks at firewalls and VPNs. Hands on sessions include using hacking tools and configuring firewalls.

Prerequisites

There are no formal prerequisite courses, just a good knowledge of how IP works.

A good suggested course would be TCP/IP foundation for engineers

What You Will Learn

By the end of the course delegates will be able to:

- Describe:
  → Basic security attacks
  → RADIUS
  → SSL
  → IPSec
  → VPNs
- Implement digital certificates
- Deploy firewalls to protect Web servers and users.
- Secure Web servers and clients.
