This 5-days, hands on course will provide learners with an in-depth exploration of the Apple operating system - macOS. Using a mixture of trainer-led presentations and hands-on exercises, learners will set their computers up from scratch; configure settings and explore the latest features; and learn how to troubleshoot and resolve problems.

Prerequisites

Some knowledge of macOS would be ideal but not necessary.

What You Will Learn

- Install, deploy and configure macOS
- How to manage differ user accounts in macOS
- Understand and configure built-in security features
- Managing the macOS file systems
- Configure and troubleshoot macOS networking
- How to manage macOS with Mobile Device Management solutions
- Installing and troubleshooting applications
- macOS peripheral management
- Manage and troubleshoot the boot process
