Duration: **5 Day**

Overview

Red Hat Virtualization (RH318) teaches experienced system administrators how to use the virtualization features of Red Hat® Enterprise Linux® managed through the Red Hat Virtualization suite.

Students acquire the skills and knowledge to effectively create, deploy, manage, and migrate Linux virtual machines hosted on either dedicated Red Hat Virtualization Hypervisor nodes or Red Hat Enterprise Linux servers using Red Hat Virtualization Manager.

Please Note: This course does not include www.qa.com/EX318 exam. Delegates who wish to obtain the Red Hat Certified Vitualization Administrator credential may like to consider booking the RH318 course and exam bundle.

Target Audience

Experienced Linux system administrators responsible for managing enterprise servers who are interested in learning how to manage large numbers of servers or virtual machines using Red Hat Enterprise Virtualization.

Prerequisites

IT professionals who have earned an Red Hat Certified System Administrator (RHCSA) certification or maintain the equivalent experience with Linux

What You Will Learn

Course content summary

- Deploy Red Hat Virtualization.
- Configure Red Hat Virtualization environment (datacenters, clusters, and storage domains).
- Install, manage, and troubleshoot virtual machines (servers and desktops).
- Create virtual machine snapshots.
- Use templates for rapid virtual machine deployment.
- Secure Red Hat Virtualization environment with multilevel administrative roles.
- Monitor and create custom reports.
- Migrate virtual machines and explore high-availability options.

Impact on the organization

This course is intended to develop the skills needed to improve efficency within a virtualization environmnet. Expected results include reducing IT infrastructure costs by virtualizing more workloads on less hardware while avoiding vendor lock-in. This class will train virtualization administrators to work more efficiently by using Red Hat Virtualization to deploy, manage, and monitor virtualization environments. Doing so will result in faster response times for users requesting and using virtualized resources.

Red Hat has created this course in a way intended to benefit our customers, but each company and infrastructure is unique, and actual results or benefits may vary.

Impact on the individual

As a result of attending this course, students should be able to create and deploy virtual servers and workstations. Using a single full-service management interface, Red Hat Virtualization Manager, students will be able to configure, manage, and migrate systems within the virtualization environment.

Students should be able to demonstrate the following skills:

- Deploy Red Hat Virtualization
- Configure, install, and deploy virtual machines
- Migrate virtual machines between hypervisor hosts
- Perform troubleshooting tasks
- Secure and monitor the virtualizaton environment
- Generate custom operational, environment, and resource reports

Outline

Overview of Red Hat Virtualization
Define and discuss general virtualization, Kernel-based Virtual Machine (KVM), and the concept of virtualization in Red Hat Virtualization.

Install, configure, and test manager
Install, configure, secure, and troubleshoot Red Hat Virtualization Manager.

Install and configure hypervisor hosts
Install, configure, upgrade, and troubleshoot Red Hat Virtualization Hypervisor.

Create datacenters and clusters
Create datacenters and clusters using Red Hat Virtualization Manager.

Create and maintaining storage
Create and administer data, iso, and export storage domains using Red Hat Virtualization.

Create logical networks
Create logical networks using Red Hat Virtualization Manager.

Deploy virtual machines
Install, deploy, and manage virtual machines (VMs) with appropriate drivers and agents using Red Hat Virtualization.

Manage VM snapshots and images
Manage VMs with snapshots and share images using Red Hat Virtualization.

Automate VM deployment
Utilize templates, pools, and cloud-init to automate deployment of VMs using Red Hat Virtualization.

Monitor and report Red Hat Virtualization
Locate information using the Red Hat Virtualization administration portal to generate reports of the environment.

Overview of advanced Red Hat Virtualization topics
Describe backing up and restoring Red Hat Virtualization, making Red Hat Virtualization highly available, and using the application programming interface (API).

Install and configure Red Hat Enterprise Linux host
Install and configure a Red Hat Enterprise Linux host.

Migrate VMs and configure high availability
Migrate VMs manually and automatically, and configure high availability with live migration using Red Hat Virtualization.Comprehensive reviewReview the course objectives.

Does NOT include EX318 exam. If you are interested in sitting the exam at the end of the course, please see the RH319 Bundle www.qa.com/RH319.
