Overview

Lead PI Planning and deliver prioritised features more effectively with AI-enhanced backlog techniques.

Designed for Product Owners and Product Managers who connect business strategy with Agile delivery, this course combines established SAFe practices with AI-enabled product management capabilities.

Participants receive **access to SAFe Studio, the opportunity to earn a digital badge, and expert-led live training sessions**.

Bring strategy, Agile execution, and AI together to accelerate measurable value delivery across your enterprise.

This **two-day certification course** develops the knowledge and practical skills required to perform the **Product Owner/Product Manager (POPM)** role effectively within an Agile Release Train (ART).

Participants learn how to break Epics down into Features and Stories, manage and refine backlogs, apply AI to product management activities, and plan and execute Iterations and Planning Intervals.

The course also explores how the Continuous Delivery Pipeline can support ongoing improvement across product development and delivery.

Prerequisites

The course is open to participants at all levels of experience, with no mandatory prerequisites. However, the following are strongly recommended:

- Previous attendance on a Leading SAFe® course
- Experience working within a SAFe environment
- Experience with Lean, Agile, or other relevant certifications

Before the instructor-led course, learners will complete approximately **three hours of preparation through SAFe Studio**, consisting primarily of video-based learning supported by additional reading.

A SAFe Studio account is required to access these materials. Full setup instructions and support will be provided, and learners will receive the preparation content approximately **one week before the course begins**.

Important: The **Miro** collaboration platform is used during the live virtual sessions. Participants should confirm that they can access Miro in advance to ensure full participation in course activities.

Using a personal device rather than a restricted corporate machine is strongly recommended where possible, as organisational access controls may limit the use of Miro.

AI Empowered SAFe® Product Owner/Product Manager Training

Duration: **2 Day**

What You Will Learn

Role and Responsibilities

Develop a strong understanding of the day-to-day responsibilities of a SAFe POPM, including backlog ownership, forecasting, and the management of risks and dependencies.

Lead and Support PI Planning

Learn how to prepare for and lead PI Planning, connect product vision with business goals, and collaborate with teams to establish clear PI Objectives.

Product Delivery

Apply Lean-Agile thinking and customer-centricity to define and prioritise Features and Stories that can be developed, tested, and delivered efficiently.

AI Skills for Modern Product Roles

Apply practical and responsible AI techniques to improve backlog refinement, prioritisation, Feature discovery, and customer connection.

Outline

- Becoming a Product Owner/Product Manager in the SAFe enterprise
- Preparing for and leading PI Planning
- Executing Iterations
- Executing the Planning Interval
- Becoming a Certified SAFe® Product Owner/Product Manager
- AI skills for modern product roles
