The **BCS Foundation Certificate in Business Analysis** introduces learners to the essential principles, techniques, and responsibilities of the Business Analyst role. Business Analysts play a vital part in helping organisations deliver successful change by connecting business objectives, stakeholder needs, and technology solutions.

This four-day foundation course provides a practical introduction to Business Analysis through interactive discussions, real-world examples, and hands-on exercises based on a case study. Participants will gain an understanding of the tools, techniques, and best practices commonly used throughout the business analysis lifecycle while developing the confidence to apply them in workplace scenarios.

At the conclusion of the course, learners have the opportunity to take the official**BCS Business Analysis Foundation** multiple-choice examination. This internationally recognised certification forms the knowledge-based entry point to the **BCS International Diploma in Business Analysis** and provides an excellent foundation for further professional development.

Whether you are starting a career in Business Analysis or looking to broaden your understanding of business change initiatives, this course offers the practical knowledge and recognised certification needed to progress.

Prerequisites

There are no formal prerequisites for this course.

It is designed for individuals who are new to Business Analysis or anyone wishing to gain a clearer understanding of the Business Analyst role.

Learners with previous Business Analysis experience or those who have already completed modules within the BCS Diploma pathway may prefer the accelerated three-day version of this programme.

What You Will Learn

After completing this course, learners will be able to:

- Describe the core responsibilities, skills, and competencies required of a Business Analyst.
- Explain how business strategies are developed, analysed, and implemented.
- Apply a structured Business Analysis process model to support organisational change.
- Identify stakeholders, understand their perspectives, and manage stakeholder engagement effectively.
- Analyse and model business processes using recognised Business Analysis techniques.
- Elicit, analyse, validate, document, and manage business requirements.
- Explain the purpose and structure of a business case used to justify change initiatives and investment decisions.
