Overview

Data visualisation is a much-needed skill in today's data-driven world, and effective data visuals are an essential representation of data or information. Understanding the essential skills of presenting reports can enhance the communication of data patterns and trends in easy-to-read formats, moving towards influencing and informing your audience.

Starting with the basics of data visualisation, you will learn the principles and techniques of data visualisation to enable you to communicate patterns and trends better visually.

This course offers a comprehensive and immersive learning experience for individuals seeking to harness the power of data through compelling visualisations.

Learners will leave the course equipped with the knowledge and fundamental skills to create visually stunning and informative data representations, enabling them to make data-driven decisions confidently.

Prerequisites

While no prior data visualization experience is necessary, the following is beneficial:

- An understanding of data literacy and data concepts
- Familiarity with Microsoft Excel, Power BI or similar

What You Will Learn

This one-day fundamentals course is designed to provide you with the understanding and ability to:

- Identify different types of visualisation
- Remove distractive elements
- Focus audience attention
- Emphasise the key points and measures
- Provide a narrative to explain the visual
