Overview

BCS Agile Foundation Certificate is a **two-day foundation-level certification course** designed for professionals who want a structured understanding of Agile values, principles, roles, techniques and common ways of working.

Agile has become widely adopted as organisations seek to respond to change more effectively, reduce time to market, minimise unnecessary work and remain closely aligned with customer needs. Agile, however, is more than a collection of meetings or techniques. Compared with traditional Waterfall approaches, it introduces a broader way of thinking about teamwork, customer involvement, product development and response to change.

The course begins with the Agile Manifesto and explores empirical working, Agile culture, team roles and frequently used techniques and practices. Participants are also introduced at a high level to approaches including **Scrum, Extreme Programming (XP), DSDM Atern, Kanban, Lean Software Development and Lean Startup**.

Rather than training participants to implement one specific Agile methodology, the programme establishes the broad foundation required to understand Agile across different environments.

Prerequisites

There are no mandatory experience requirements.

Previous experience as part of a project team—for example as a tester, business analyst, software developer, project manager or release manager—can be helpful, but is not required.

Who Should Attend

This course is particularly suitable for:

- Professionals seeking a foundation-level understanding of Agile
- Individuals beginning to work in Agile environments
- Leaders and managers who want to understand the organisational value of Agile
- Project, product and software development team members
- Professionals seeking to understand the differences between traditional and Agile ways of working
- Candidates preparing for the BCS Agile Foundation Certificate
