Overview

Business Analysts are increasingly expected to contribute beyond traditional IT-focused responsibilities. Modern organizations require professionals who can understand business strategy, assess operational challenges, and identify opportunities for improvement that support organizational objectives.

This course provides participants with the knowledge and practical techniques required to analyze business situations, model business activities, engage effectively with stakeholders, and recommend meaningful business improvements. Learners develop a structured approach to business analysis while gaining the skills needed to support change initiatives across an organization.

Upon completion, participants will be prepared to take the BCS Practitioner Certificate in Business Analysis Practice examination.

Certification

Upon completion, participants may take the BCS Practitioner Certificate in Business Analysis Practice examination.

Successful candidates will earn a globally recognized BCS certification that validates their business analysis knowledge and practical skills.

Prerequisites

There are no formal prerequisites for attending this course.

It is suitable for anyone seeking to develop business analysis knowledge or build a career within the business analysis discipline.

Candidates taking the BCS examination must present valid photographic identification before sitting the exam.
