Overview

The {*training} provides an internationally recognized foundation for individuals beginning their career in **cybersecurity and penetration testing**.

Delivered by **CREST-approved training providers**, this course equips participants with the knowledge to assess network services, operating systems, and web applications for vulnerabilities.

The training concludes with the **CPSA exam**, a multiple-choice assessment conducted via **Pearson VUE**, which confers **CREST Practitioner status** upon successful completion.
CPSA is the **prerequisite for the CREST Registered Tester (CRT)** exam and aligns closely with **OffSec OSCP (PEN-200)** standards.

The **CPSA certification** validates your understanding of key penetration testing and security assessment concepts.
It's the ideal entry point for professionals aiming to advance toward **CREST Registered Tester (CRT)** or **OffSec OSCP (PEN-200)** certifications.

Completing this course positions you at the forefront of the cybersecurity industry — ready to join professional pen test and incident response teams.

Prerequisites

To get the most from this course, participants should have:

- A **basic understanding of IT systems** (networking, IP, ports, OS concepts).
- Prior completion of a **Security Fundamentals** course is recommended.
- Some hands-on experience with system or network administration is beneficial.

Who Should Attend

- Entry-level cybersecurity professionals
- Aspiring penetration testers and ethical hackers
