Overview

This course is designed to equip IT professionals with the knowledge and skills necessary to enhance endpoint security using Microsoft Intune and Microsoft Copilot for Security. Participants will explore the essentials of Microsoft Intune, advanced threat detection and response capabilities with Microsoft Copilot for Security, and strategies to optimize the integration between Intune and Copilot. Through a combination of theoretical knowledge and practical application, learners will be prepared to strengthen their organization's security posture effectively.

Prerequisites

Participants should have:

- A basic understanding of IT security principles
- Familiarity with Microsoft Intune
- Experience with device management in an enterprise environment
- Knowledge of Microsoft Entra ID
- Access to Microsoft Intune and Copilot for Security tools for hands-on practice

Target audience

This course is intended for:

- Administrators responsible for endpoint security
- Security engineers focusing on threat detection and response
- Security operations analysts aiming to optimize security tools

What You Will Learn

By the end of this course, learners will be able to:

- Understand the core functionalities of Microsoft Intune for device and application management
- Leverage Microsoft Copilot for Security to enhance threat detection and response
- Integrate Microsoft Intune with Copilot for Security to optimize security operations
- Implement best practices for securing endpoints using AI-driven tools
