Overview

MongoDB is a free NoSQL database administration system that has open source cross-platform features. One of the leading NoSql (Not Only SQL) databases, MongoDB, stores the data in the form of Binary JSON(BSN) document-oriented and hierarchically as an alternative to current relational databases. It is designed for performance oriented large scale applications.

After completing this course you can design databases for MongoDB applications and administer MongoDB databases.

Prerequisites

There are no prerequisites for this course.

Who Should Attend

- Those, who want to learn MongoDB
- Software Developers
- Database Administrators
- System Administrators

What You Will Learn

- What's NoSQL understanding and purpose?
- Which cases NoSQL databases can use?
- What's MongoDB?
- What is distinguished the main fundamental features,components and utilities from another NoSQL databases?
- How you can install and configure MongoDB?
- How integrate MongoDB and NodeJS?
- To learn JavaScript, JQuery, Ajax technology for MongoDB queries.

Front-end Development and MongoDB Training

Duration: **4 Day**

Outline

- Introduction to Scalable Web
- Javascript
- Advanced Javascript
- NoSQL Databases
- MongoDB
- Node.js and Serverside Javascript
- Node.js and MongoDB integration
- Express.js
- jQuery
- Ajax and jQuery
- jQuery UI
- Knockout.JS and MVC
