Overview

This five-day instructor-led will provide delegates with knowledge and skills to design, deploy and manage a SharePoint Online architecture using best practice principals.

Prerequisites

Important This course may require the use of Multifactor Authentication (MFA). Please read this page and download the Microsoft Authenticator app (or similar app) prior to attending the course:

https://www.qa.com/resources/faqs/mfa-requirements/

Please see the below Microsoft article for further information on reasons for the MFA requirement:

https://learn.microsoft.com/en-us/entra/identity/authentication/concept-mandatory-multifactor-authentication

- Basic understanding of 'cloud' concepts
- Experience with Microsoft 365 core components such as user IDs
- Attendance of the QA Mastering SharePoint Online Fundamentals' course (QASPEUOL1) or equivalent knowledge and experience.
- Experience with PowerShell
- Experience with traditional collaboration methods such as email and file sharing

Whilst this is not a powershell course, as powershell is one of the core administrative tools within Microsoft 365 products - there will be powershell steps referenced within the course and used in the labs. Where powershell is used in the labs Students can either copy and paste the instructions, or in most exercises use a GUI alternative method (though sometimes a GUI alternative is not available). A high level understanding of what powershell is would be very beneficial, but not absolutely essential for this course.

Target Audience

The primary audience is IT professionals with experience of Microsoft 365, who want to learn best practice design, deployment, configuration and administration of SharePoint Online.

Mastering SharePoint Online Design, Architecture and Best Practice Administration Training

Duration: **5 Day**
