Overview

This 5 Day course provides an overview of the fundamentals of Networking and Security in Information Technology Networked environments. The first three days cover the Networking concepts, with the remaining two days covering Security.

Prerequisites

This is an introductory level course so prior knowledge of the course content is not required, but experience of the fundamentals of computing and computer hardware would be desirable. Knowledge of configuring a computers' settings and accessing the command line tools would be useful, but not essential.

Target Audience

This course is designed for those with no Network or Security field experience. Those that may be considering a career in the Networking or Security areas would find this knowledge beneficial, before moving on to more detailed study and certifications.

What You Will Learn

This course is designed to introduce the core concepts underlying how computers communicate, including the configuration settings required, the hardware required and how it operates. It includes cloud-based services that many networks and businesses are coming to rely on. The Security section will introduce core concepts, terminology and implementation of Security in the areas of the computer itself and the network it's connected to.
