Build Agile Team Excellence and Leverage AI for Greater Productivity

AI-Empowered SAFe® for Teams is a two-day training program designed to help professionals work effectively within an Agile Release Train (ART) while developing the skills needed to succeed in a modern SAFe environment.

Participants learn how high-performing Agile teams collaborate, plan and execute Iterations, contribute to PI Planning, and deliver value continuously. The course also introduces responsible AI practices and practical prompting techniques that help teams streamline workflows, increase productivity, and solve problems more efficiently.

By the end of the course, participants will be prepared to pursue the SAFe® Practitioner (SP) certification and develop a personal strategy for incorporating AI into their day-to-day work.

Prerequisites

There are no mandatory prerequisites for attending this course.

Participants receive approximately three hours of self-paced preparation content through SAFe Studio before the course begins.

The course uses the Miro collaboration platform during live virtual sessions. Learners are encouraged to verify platform access in advance and, where possible, use a personal device to avoid organizational access restrictions.

Who Should Attend

This course is ideal for:

- Agile team members
- Developers and software engineers
- Test professionals
- Scrum Masters
- Team Coaches
- Product Owners
- Professionals working in SAFe environments
- Individuals involved in Agile transformation initiatives
