Overview

Even for the simplest webpage, working with JavaScript has become an essential skill for any developer or designer. This course looks at first principals in how to start using JavaScript to interact with the page. You will build your first program so you can really experience how code works, see it in action and understand the fundamentals.

Prerequisites

- This course is designed for the delegate who is an experienced computer user, is familiar with the Internet, and is familiar with HTML. This course does not provide basic computer, Internet, or introductory HTML concepts. A delegate who isn't familiar with basic computer terminology, or who hasn't used the Internet or HTML should first take the Web Development Fundamentals - HTML and CSS (www.qa.com/QAHTMLCSS) course.

Dual monitor setup is required for when attending this course via the Virtual Classroom delivery method.

What You Will Learn

At the end of this course you will be able to:

- Add script to a web page
- Manage JavaScript types effectively
- Program using flow of control
- Understand functions, object and arrays
- Create new HTML content using the DOM
- Hook up events
- Use JavaScript to interact with forms
