Overview

This three-day course provides students with the fundamental knowledge and skills to configure and manage Internet Information Services. This course is intended to help provide pre-requisite skills supporting a broad range of Internet web applications, security, and knowledge to help support other products that use IIS such as Exchange and SharePoint. In keeping with that goal, this course will not focus on any particular web application or development practice.

Parts of the course are based on configuration using the new Windows Admin Centre and Windows PowerShell.

Prerequisites

Participants should have:

- A Knowledge and real-world experience working day-to-day with Windows Servers in an enterprise environment.
- Knowledge of and experience of Windows Server and Windows Client administration, maintenance and troubleshooting.

Additionally, students would benefit from having some previous Windows Server operating system experience, such as experience as a Windows Server systems administrator. An understanding of Windows PowerShell would be advantageous.

Target Audience

This course is intended for IT Professionals already experienced in general Windows Server and Windows Client administration. No prior experience with any version of Internet Information Services is assumed. This course will help them update their knowledge and skills of IIS related to Windows Server 2016, Windows Server 2019, Windows Server 2022 and Windows Server 2025.

Candidates suitable for this course would be:

- Windows Server administrators who are relatively new to Windows Server administration and related technologies, and who want to learn more about the IIS Role and role services in Windows Server 2016 or later.
- IT professionals who have skills in other areas, such as general system administration, who are looking for knowledge and skills for career development in IIS.
