AI for Personalization Eğitimi

BİLGİNÇ IT Academy
info@bilginc.com
bilginc.com

Süre: **3 Gün**

This course provides learners with practical knowledge on planning and implementing AI-powered personalization strategies within marketing. The workshop focuses on hyper-personalization, an advanced approach that enhances traditional personalization using AI to deliver unique, one-to-one customer experiences.

Learners will explore real-world applications of AI-driven personalization, including content creation, product recommendations, and personalized communications. The course will equip participants with the strategic and technical knowledge required to design and deploy hyper-personalization at scale.

By the end of the session, learners will be able to effectively engage with key stakeholders and internal teams to drive AI-powered personalization initiatives within their organization.

Önkoşullar

Participants should have:

- A foundational understanding of marketing strategies and customer experience principles
- Familiarity with basic AI and data-driven marketing concepts (recommended but not required)

Target audience

This course is designed for:

- Marketing professionals looking to integrate AI into their personalization strategies
- Customer experience and digital transformation leaders aiming to enhance engagement and retention
- Data-driven marketers and AI product managers interested in practical applications of hyper-personalization
