

Business and IT System Agility in the Digital Age

Learn via: **Classroom**

Duration: **1 Day**

Overview

This introduction seminar provides you with an overview of the digital business models, business and enterprise architecture frameworks as well as methodologies that are used by the organizations to increase their agility facing the digital age disruptions. In particular, this seminar aims at helping you to understand frameworks that are used worldwide to align digital business models, organization and IT architectures with changing competitive landscape.

Notice : The above training-mentoring sessions are conducted interactively on a case study to illustrate how to ensure good level of traceability between business and IT system architectures.

Concepts are explained first using case study examples and may then be followed by solution drafts to your own business case during or after these sessions. We can also accompany you by reviewing and validating solutions depending on your needs. Minor changes may be brought to their contents depending on the evolutions of these standards and commercial strategies.
