Overview

The APMG AgilePM Practitioner course builds on the AgilePM Foundation knowledge, focusing on applying and tailoring the AgilePM methodology to real-world projects. Participants will develop the skills needed to lead or manage Agile projects, adapt the AgilePM framework to varying project environments, and handle project risks and governance in an Agile context. The course includes scenario-based learning to ensure practical application of AgilePM principles in complex and dynamic project environments.

Prerequisites

Participants must have successfully completed the APMG AgilePM Foundation certification as a prerequisite for enrolling in the Practitioner course.

Please note - learners must have completed the v3 Foundation - QAAGPMF - not the v2 Foundation (PPMAGF)

Target audience

This course is ideal for:

- Project managers and leaders looking to enhance their skills in Agile project management
- Product owners and team leads responsible for delivering Agile projects
- Solution architects, business analysts, and other roles involved in quality assurance and compliance within Agile projects
- Project management officers and professionals involved in project governance or overseeing multiple Agile projects

What You Will Learn

By the end of this course, participants will be able to:

- Apply and tailor AgilePM principles and processes to different project scenarios
- Lead and manage Agile project teams with a focus on collaboration, communication, and effective leadership
- Plan, track, and control Agile projects while maintaining regulatory compliance
- Manage risks and ensure quality across Agile projects
- Effectively use AgilePM in multi-team environments and ensure successful project delivery
