This 2-day DAMA DMBoK Data Management Fundamentals course addresses all disciplines as identified by the international standard, DAMA Body of Knowledge (DMBOK2) and is aimed to individuals interested in developing concrete professionalism in the field of Data Management. This course provides a solid foundation of the different information disciplines across the complete Data Management spectrum and introduces students to the different levels of Industry professional certification the DAMA Certified Data Management Professional (CDMP).

Prerequisites

- None

What You Will Learn

- The participant will gain basic knowledge of the DAMA framework and its data management functions.
- The participant will be able to use E-R modeling to establish facts, relationships and rules between entities at different levels of detail, including conceptual and logical models.
- The participant knows how to use top-down and bottom-up approaches to initiate development of a data model and then elaborate means-out.
- The participant can apply data normalization in an ER model and relational database schema.
- The participant knows techniques to discover additional requirements and to implement business rules in the data model.
- The participant is able to 'read' a data model and communicate it to subject matter experts, using the appropriate terminology.
