Overview

This one-day instructor-led course provides delegates with a technical overview of device management and how it fits in to the modern place.

Prerequisites

- A basic understanding of the architecture and technologies that support the internet is required.
- Delegates should have familiarity with technical IT, device management and applications

Target Audience:

This course is suitable for engineering, technical management and sales/marketing staff who have no prior knowledge of device management.

What You Will Learn

- What is device management
- Why there is a need to move away from traditional device management methods
- What options are available for device management
- How to enrol, manage and control devices with a device management solution
- The need for application management in the modern work force
