Overview

The Salesforce Certified Platform Foundations course is designed as an introductory program for **Trailblazers with 0-6 months of Salesforce experience**.

The course focuses on developing the foundational knowledge needed to understand the Salesforce environment. Participants will explore what a Customer Relationship Management (CRM) platform is, how CRM technology is used, and the types of business requirements it can address. They will also examine how the Salesforce product suite can help transform and automate business teams and processes.

The program is also designed to prepare participants for the**Salesforce Certified Platform Foundations** exam. This certification enables individuals who are developing a Salesforce career to demonstrate their foundational skills and knowledge.

Through hands-on experience, participants will become familiar with the Salesforce learning ecosystem by completing activities such as setting up a Trailblazer ID and earning their first Trailhead badges. These activities provide a starting point for continuing to build expertise across the Salesforce platform.

Prerequisites

There are no specific prerequisites for attending this course.

Outline

Module 1 – Support within the Salesforce Ecosystem

In this module, participants will:

- Explore the different resources available to support Salesforce learning.
- Identify Salesforce Customer 360 product offerings and understand appropriate situations for using them.

Module 2 – Salesforce in Action

In this module, participants will:

- Explore how organizations use Salesforce.
- Identify the fundamental approach to customizing Salesforce.
